

Antimicrobial Susceptibility Testing

MICRONAUT-S Anaerobes MIC

True MIC values by broth microdilution

Innovation with Integrity

What can it be used for?

The increasing microbial resistance observed for anaerobic bacteria requires a standardized routine antimicrobial susceptibility test (AST) of anaerobes in the microbiological lab. Based on the broth microdilution (BMD) procedure, the AST plate MICRONAUT-S Anaerobes MIC provides the tool for phenotypic detection of clinically relevant resistance mechanisms in anaerobic pathogens such as *Clostridium* spp., *Bacteroides* spp. and *Peptostreptococcus* spp.

Antibiotics

The plate configuration includes antibiotics such as metronidazole, carbapenems, beta-lactamase inhibitor combinations, tigecycline or moxifloxacin, showing good antimicrobial efficacy against anaerobic bacteria.

- Amoxicillin/Clavulanate
- Ampicillin
- Clindamycin
- Doxycycline
- Ertapenem
- Imipenem
- Meropenem
- Metronidazole
- Moxifloxacin
- Penicillin G
- Piperacillin/Tazobactam
- Tigecycline
- Vancomycin

Features and benefits

- Standardized MIC determination of antibiotics with MICRONAUT-Wilkins-Chalgren Broth in routine laboratory diagnostics
- Due to the spectrum of antibiotics, the MIC plate is appropriate for testing anaerobic bacteria originating from hospital and community acquired infections
- Reading and evaluation of the AST results can be performed visually or photometrically
- The MICRONAUT software provides reading, evaluation and interpretation according to EUCAST or CLSI criteria

Shelf life and storage

- MICRONAUT-S Anaerobes MIC, Shelf life: 24 months from date of production, Storage: at room temperature (15-25°C)
- MICRONAUT-Wilkins-Chalgren Broth, Shelf life: 12 months from date of production, Storage: at 2-8°C
